Construction and Description

■ General

Bolenz & Schäfer has been a leader in the area of accumulator technology for more than 60 years. As a specialist in hydraulic accumulator applications, it is our primary objective to develop efficient solutions in line with market needs. In accordance with the rebranding initiative of our parent company, Roth Industries – of which Bolenz & Schäfer has been a solid member for more than a quarter of a century – we are proud to continue our activities as Roth Hydraulics.

The Roth piston accumulator can be used in a variety of applications. It is a specialised product that offers a wide range of options, allowing it to be customised to individual customer requirements. Precisely tuned for optimum efficiency, it can be used to store hydraulic energy, absorb pressure surges, dampen pulsation and smoothen volume flow rates by means of compressing nitrogen.

Roth piston accumulators offer high performance, low maintenance and a wide range of functions around the clock. They are suitable for use in extreme climatic conditions, confined spaces and allow for careful use of resources.

The **application** fields of the Roth piston accumulator are many

and diverse. Amongst other applications, they can be used for:

- > Energy storage
- > Pulsation damping
- > Volume compensation
- > Hydraulic springing
- > Shock absorption
- > Media transfer partition
- > Emergency operation

Advantages

- > optimal application solution derived by changing diameter or length
- > piston position monitoring possible
- > installation position arbitrary
- > total discharge is possible
- > long life, reduced friction sealing system
- > maintainable design
- > low gas permeation compared to bladder or diaphragm accumulators due to small sealing areas.
- > low piston weight guarantees high dynamics
- > large connection cross-section possible
- > sealing systems available for different kinds of operating liquids, wide temperature range and applications
- > in case of failure no abrupt gas loss can occur

Construction and Description

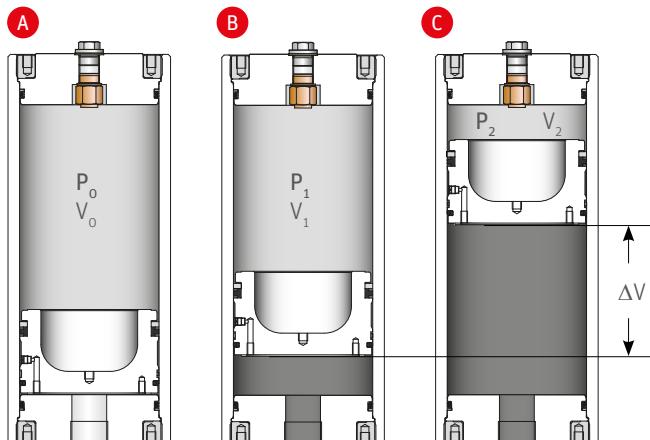

Function

Roth piston accumulators enable the storage and release of hydraulic energy. As pressurised hydraulic fluid flows in at the oil port valve, the nitrogen within the accumulator becomes compressed. Hydraulic energy is stored. When the pressure in the hydraulic system drops, the gas expands, causing the piston to move in the direction of the oil, forcing the liquid out from the piston accumulator into the hydraulic system.

Hydraulic energy is released. During this process, the piston also serves as a separator.

The three basic settings of the piston:

- A** The piston is pre-charged with nitrogen. The fluid side is pressureless.
- B** Position at minimum working pressure. A small volume of fluid must remain between the piston and end cap so that the piston does not strike . P_0 therefore has to be less than P_1 .
- C** Position at maximum working pressure. The volume change ΔV between the position at minimum working position corresponds to the stored fluid volume.

V_0 = Total gas volume of the accumulator

V_1 = Gas volume in the piston accumulator at P_1

V_2 = Gas volume in the piston accumulator at P_2

ΔV = Released or absorbed useful volume between P_1 / P_2

P_0 = Pre-charge pressure of the gas side in the piston accumulator

P_1 = Minimum working pressure

P_2 = Maximum working pressure

Overview Roth piston accumulator

Overview Roth piston accumulator	
Volume	0,1 l ... 1.500 l
Nitrogen transport filling	available - after testing
Operating pressure	max. 1.200 bar
Materials	Carbon steel, special materials, stainless steel (on request)
Medium	see table next side
Temperature	-60 °C ... +200 °C
Installation position	preferably vertical, oil side down - other positions possible
Corrosion protection	primer coated, top coat/ special coating available
Fluid ports	G-inside thread G1/4 - G2, SAE thread connections Flange- /Special connections available
Acceptances	DGR 2014/68/EU, ASME, ML China, NR13, EAC, GL, ABS, BV, DNV, CRN, CCS, LRS, RINA

Operating temperature

Temperature range standard: -10 °C up to +80 °C , different temperature ranges, e.g. -40° C up to +80° C, available on request.

Condition on delivery

Accumulator shell base-coated with universal priming colour RAL 1001 (beige), inside and connecting surface oiled and openings protected, without hydr. fluids, without gas filling.

Other colors and sand blasting or other surface treatments (e.g. galvanic zinc plating) is possible. Please ask for our offer.

Pressure fluids

Sealing type PUR:

mineral oil, hydraulic oil due to DIN 51524 part 2

Sealing type NBR:

hydraulic oil due to DIN 51524 part 2, flame protected liquids, water and emulsions, but no HFD-fluids.

Roth piston accumulators for other temperatures, other fluids or with longterm protection on request.

Construction and Description

Connections

Roth piston accumulators are also available with other or additional connections (e.g. acc. to works standards).

Larger nominal widths (for high flow rates see special connections / alternative filling valves) can be provided by special design. Let us know the required dimension and we will make a proposal!

Gas filling

Only nitrogen of Class 4 is to be used, never oxygen or compressed air. The use of lower grade, class 2.8 industrial nitrogen can lead to corrosion and failure of the accumulator under certain operating conditions.

Design pressure (see selection table)

The design pressure corresponds with the max. allowable working pressure (MAWP) and is also the max. permissible set pressure for the safety equipment (safety valves, burst-discs) against pressure excess.

We recommend operation of the accumulators with a maximum pressure of up to 0.9 x MAWP to avoid safety equipment repetitive.

Note Operation and Maintenance

Please observe the information in the operating and maintenance instructions for this.

■ Selection of pressure fluids

The table shows a selection of elastomer materials and a general overview of stable liquids. In case of application, the stability must be predetermined and checked.

Fluid	Temperature range °C	Elastomer
Fluids based on mineral oil* (HL; HLP)	-20 °C ...+80 °C	NBR/ HNBR
Fluids based on Synthetic ester * (HEES)		
Hardly flammable fluids* (HFA; HFB; HFC)		
Water *		
Many acids, bases and brines during low temperatures	-15 °C ...+180 °C	Viton (FKM)
Fluids based on mineral oil* (HL; HLP)		
Fluids based on Synthetic ester * (HEES) (HEES)		
Water free synthetic fluids *		
Fuels *	-30 °C ...+80 °C	PUR
Concentrates of inorganic or organic acids and bases*		
Mineral oil * (HL; HLP)		
Hardly flammable fluids* (HFA)		

*Fluid selections for low temperature ranges as well as for temperature applications below -20°C or above +80°C require consultation. Fluids below -20°C or above +80°C require consultation.

 **Note:** The compatibility of hydraulic fluid and elastomer is not automatically guaranteed and can only be tested upon request. Compatibility tests may be necessary if no empirical data for a specific fluid is available.

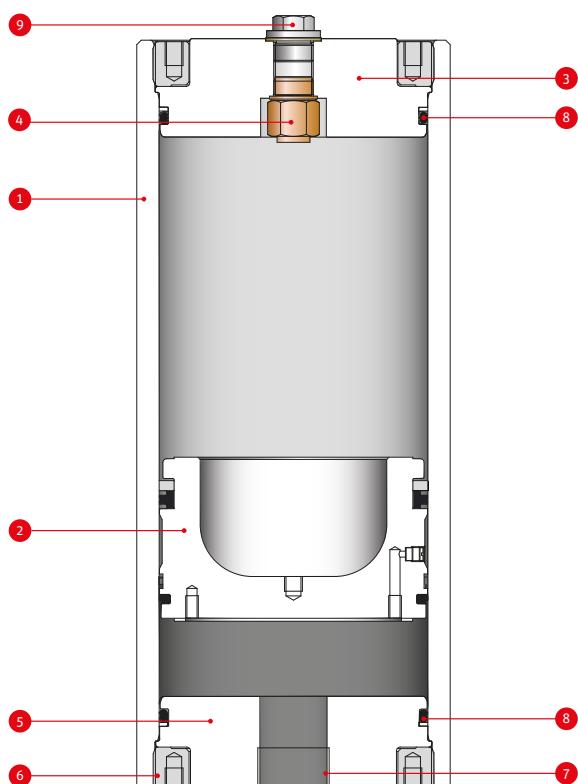

Note Operation and Maintenance

Please observe the information in the operating and maintenance instructions for this.

Construction and Description

Roth Piston accumulator design

Standard AK

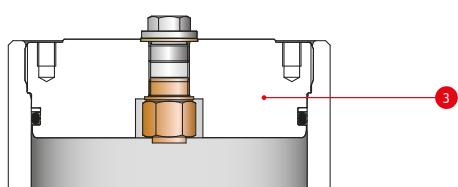

Overview Roth piston accumulator

Volume	0,1 l ... 1.500 l
Operating pressure	Max. 1.200 bar
Materials	Carbon Steel, special materials, stainless steel (on request)
Temperature	-60 °C ... +200 °C
Acceptances	DGR 2014/68/EU, ASME, other see acceptance table next page

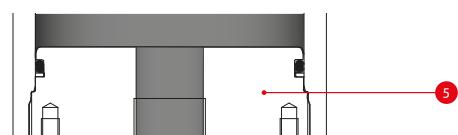

Item	Designation	Material
①	Accumulator shell	Carbon steel
②	Piston	Aluminium (Carbon steel)
③	Screwed end cap gas side (2-part)*	Carbon steel
④	Roth gas filling valve G3/4	Carbon steel
⑤	Screwed end cap oil side (2-part)*	Carbon steel
⑥	Thread ring	Carbon steel
⑦	Connection oil-side	
⑧	End cap seal	
⑨	Screw plug G3/4	Carbon steel

*Screwed end caps for oil and gas side are available in a one or two part design, as of piston diameter 180mm, see illustration below.

Item	Designation	Material
③	Screwed end cap gas side (1-part)*	Carbon steel
⑤	Screwed end cap oil side (1-part)*	Carbon steel

*Up to piston diameter 150mm the standard design for screwed end caps is one pieced. As of piston diameter 180mm is a one part or a two part possibility available, see illustration above.

Rules and regulations

■ Acceptance

Roth Hydraulics accumulators are manufactured for the European market and are approved in accordance with the Pressure Equipment Directive "DGR 2014/68/EU". This is applicable to the AK series piston accumulators.

Acceptance is effected after individual approval, normally by the TÜV as the appointed laboratory.

The accumulators larger than 1 l are awarded a CE mark and are supplied with a declaration of conformity and operating instructions. In addition, the standard documentation comprises a certificate of conformity by the appointed laboratory, an acceptance drawing and a list of materials used. This also guarantees possible reworking or overhauling of the individual components after decades of use.

This Pressure Equipment Directive is also accepted by many other countries besides the direct EU member states. Only some additional approval documentation may sometimes be required. Countries such as Russia or China in addition require certification of the manufacturer in accordance with the legislation of the specific exporting country.

Pressure vessel deliveries to the USA, on the other hand, must comply with the ASME Code (American Society of Mechanical Engineers). Roth Hydraulics (formerly Bolenz & Schäfer) has been licensed to supply pressure vessels to the United States under Section VIII para. 1 of the ASME Code since 1981. It thus has the longest experience of any piston accumulator manufacturer in Germany with these regulations. Pressure vessels approved by the

ASME are given an U stamp certification, which is delivered with a data report as acceptance documentation.

This applies to the piston accumulator series UAK.

However, the ASME Code only covers pressure vessels and accumulators with an internal diameter greater than 6 inches. For products with an internal diameter of less than 6 inches (6 inches = 152.4 mm), CE certification shall apply.

ASME approved pressure vessels are also accepted in Canada.

However, additional Canadian certification (Canadian Registration Number, CRN) of the respective province is required.

The province or place of installation must be indicated when placing the order. ASME certification is often also required for the offshore industry as well as in parts of Asia.

Roth Hydraulics has all major product and company licenses for worldwide distribution.

The following tables contain a selection of the most common acceptance variants. If your planned installation country or the required acceptance is not listed, please indicate this in plain text along with the enquiry.

■ Acceptance selection table

Standard acceptances:

Country code	Countries	Approval regulation	Var. no.
EU	EU member states	Pressure Equipment Directive 2014/68/EU with CE mark	50
RUS	Russia	Pressure Equipment Directive 2014/68/EU + EAC	520
PRC	China	Pressure Equipment Directive 2014/68/EU + ML (> 30 L)	534
BR	Brazil	Pressure Equipment Directive 2014/68/EU + CE mark + NR 13	515
USA	USA	ASME Code Sect. VIII Div. 1	15

Special acceptances:

Country code	Countries	Approval regulation	Var. no.
CND	Canada	ASME Code + CRN (Canadian Registration No.) Approval depending on province – indicate „province“	29
ASME DOSH	Malaysia	ASME + DOSH Malaysia	61

Maritime acceptances:

Country code	Countries	Approval regulation	Var. no.
CCS	Various countries	China Classification Society	537
ABS	Various countries	American Bureau of Shipping	510
LRS	Various countries	Lloyd's Register of Shipment	5
GL	Various countries	Germanischer Lloyd	41
RINA	Various countries	RINA	536
BV	Various countries	Bureau Veritas	506
DNV	Various countries	Det Norske Veritas	509

Type Code AK/UAK

Special connections and filling valves

■ Special connections AK/UAK

Special connections	Designation
	Axial flange connection
	Radial flange connection
	Axial flange connection
	Screwed end cap with axial flange connection

Filling valves AK/UAK - Examples

Filling valves	Designation
	Minimess filling valve M 16 x 1,5
	Filling valve with connection 7/8" 14 UNF 1A
	Filling valve for diaphragm accumulator M 28 x 1,5
	Roth gas filling valve with connection 3/4"

 **Note:** Only a possible selection of special connections and gas filling valves is shown above.
We offer further types on request gladly.

Accumulator calculation						
Working pressure [bar]	min.	max.	Precharge pressure [bar] at 20 °C			
Discharge volume [l]				Discharge time [s]		
Alternatively to discharge volume and discharge time, total volume of accumulator [l]				Discharge profile		
Ambient temperature [°C]	min.	max.	Material	Accumulator shell		
Medium temperature [°C]	min.	max.		Diaphragm		
Medium fluid side				Bladder		
Medium gas side				Seal		
Load alternation per week	Number			Connection fluid side		
Operating mode	Short stroke	Long stroke	High frequency	Connection gas side		
Installation space - maximum height				Coating inside		
Acceptance	Country of installation	Regulations		Coating outside		

Special features/additions

Our strengths

Your benefits

Innovative

- > Own product development
- > In-house technology centre for all relevant tests and inspections including: Burst and swell test bench, endurance test rig, cold chamber, salt spray test
- > Close collaboration with universities and institutes
- > Tested and proven design and simulation program for all types of hydraulic accumulator

Global

- > Worldwide production, assembly and service sites
- > Certified according to DIN EN ISO 9001:2015, DIN EN ISO 14001
- > Proximity to customers thanks to own representatives and extensive dealer network worldwide
- > International production approvals, including ASME Code, Russian Customs Union TR-CU, Korea KGS

Complete product portfolio

- > Extensive range of diaphragm, bladder and piston accumulators
- > Complete and tested accessories range, including for professional installation and for (accumulator) safety
- > Accumulator measuring and monitoring systems, mechanical or non-contact
- > Customised special solutions
