### **Construction and description**

### General

BOLENZ & SCHÄFER has been a leader in the area of accumulator technology for more than 60 years. As a specialist in hydraulic accumulator applications, it is our foremost objective to develop efficient solutions in line with market needs. In the new design of our parent company, Roth Industries – of which Bolenz & Schäfer has been a solid member for more than a quarter of a century – we are proud to continue our activities as Roth Hydraulics.

The **Roth diaphragm accumulator** enhances the product spectrum by a further innovative product. Cost optimised, low maintenance, practically wear resistant, durable, available in versions for special media and applications as well as suitable for use in extreme conditions – these are some of the product's distinguishing features. Roth hydraulic accumulators fulfil all applicable regulations and directives.

Accumulator adapters, safety and shut-off valve blocks along with other accessories can be found in our separate catalogue Accumulator Accessories.

**The application fields** of the Roth diaphragm accumulator are many and diverse. Amongst other applications, they can be used for:

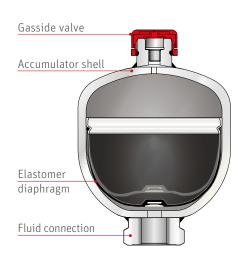

- > Energy storage
- > Pulsation damping
- > Volume compensation
- > Hydraulic springing
- > Shock absorption
- > Media transfer partition
- > Emergency operation

### Function

Roth diaphragm accumulators enable the storage and release of hydraulic energy.

As pressurised fluid flows in at the oil connection, the nitrogen becomes compressed. The fluid side and the gas side are separated by a flexible diaphragm. Hydraulic energy is stored.

When the pressure drops in the hydraulic system, the gas expands and drives the fluid out of the diaphragm accumulator back into the hydraulic system. Hydraulic energy is released.

### **Construction and description**

### Overview of Roth diaphragm accumulators

Overview of Roth diaphragm acc	umulators
Volume	0.07 l 3.5 l
Operating pressure	max. 350 bar
Accumulator shell materials	Steel (further materials on request)
Media	Fluid group 2 Pressure Equipment Directive 2014/68/EU (mineral oil based)
Temperature	-35 +80 °C
Volume flow (Q <sub>max.</sub> )	max. 150 l/min
Installation position	preferably vertical to horizontal,
Pressure vessel	welded
	coated, UV coating (water based)
Fluid ports	Inside thread G1/2 - G3/4 see table (further fluid port connections on request)
Diaphragm (elastomers)	NBR, ECO
Acceptances	PED 2014/68/EU

### Gas pre-charge pressure

The relation between the gas pre-charge pressure and maximum operating pressure (P2) should not be higher than PO/P2 = 1:4...8 (depending on accumulator type).

### Gas filling

Only nitrogen of Class 4.0 is to be used, never oxygen or compressed air.

### **Design pressure**

The design pressure corresponds to the maximum allowable working pressure (MAWP) and is also the maximum setting pressure of safety equipment against excess pressure (safety valves, burst discs). We recommend operating the accumulators with a maximum pressure of 0.9 x MAWP to prevent safety equipment from responding.

### **Operating temperature**

Standard temperature range: -10 °C to +80 °C, different temperature ranges, e.g. -40 °C to +80 °C available upon request.

#### **Condition on delivery**

Accumulator shell, welded UV-coated with universal priming in black (similar to RAL 9005). The coating is within the standard C4H. Other colours or other surface coatings are possible on request.

### **Pressure fluids**

Fluids of Group 2 according to the Pressure Equipment Directive 2014/68/EU, or in relation to diaphragm elastomer and temperature range, according to data in the "Pressure fluids" table below. The oil purity class must be at least 19/17/14 (NAS 1638-KJ8) according to ISO 4406.

#### **Accumulator installation**

To prevent damage, the accumulator must be secured according to size and weight. External forces such as vibration or external loading against the diaphragm accumulator must be avoided or taken into consideration when installing.

#### **Operation and maintenance**

Please observe the information in the operating instructions for this.

### **Installation position**

The installation position is optional, preferred is a mounting in vertical position with fluid connection below. For filling and testing kits the space requirement above the gas-filling-connection needs a minimum space of 200 mm.

### Selection of pressure fluids

	Fluid	Temperature range °C	Elastomer
	especially for low temperature range*	-35 +80	Hydrin C (ECO)
	Fluids based on mineral oil*	-10 +80	NBR
	HFA, HFB*	+5 +55	NBR
	HFC*	-15 +60	NBR
) t	Fluids based on phosphate ester and some synthetic fluids*	-15 +120	Butyl (IIR)
by request	Fluids based on phosphate ester*	-40 +120	Ethylene propylene diene (EPDM)
re	Hardly flammable and/or synthetic fluids*	-20 +140	Viton (FKM)

<sup>\*</sup>Fluid selections for low temperature ranges as well as for temperature applications below -20  $^{\circ}$ C or above +80  $^{\circ}$ C require consultation.

# **Construction and description**

### Series MEAK

Item	Designation	Material
1	Accumulator shell	Steel
2	Diaphragm	Elastomer
3	Gas-filling connection	Steel
4	Clamp ring	Steel
5	Diaphragm plate	Plastic
6	Fluid connection	Steel
7	Protection cap	Plastic

### **Rules and regulations**

### Acceptance

Roth hydraulic accumulators are manufactured and approved for the European market in accordance with the "Pressure Equipment Directive".

A conformity assessment procedure according to Pressure Equipment Directive 2014/68/EU has to be carried out for the accumulator systems. Accumulators with a volume > 1 litre bear a CE mark. Accumulators with a volume < 1 litre are designed and manufactured according to article 4 paragraph 3 and do not require a CE mark.

The Pressure Equipment Directive is also accepted by many other countries besides the EU member states. Only some additional approval documentation may sometimes be required. Countries such as Russia, Ukraine or China also require an approval, which Roth Hydraulics has.

Pressure vessel shipments to the USA, on the other hand, must correspond to the American regulations, the ASME Code. Roth Hydraulics has been approved since 1981 according to ASME Code Section VIII Division 1 and therefore has the longest experience

with these regulations in Germany as a hydraulic accumulator manufacturer. Vessels with ASME acceptance are marked with the so-called "U designator" and supplied with a data report as acceptance documentation.

However, the scope of the ASME Code only covers pressure vessels and accumulators with an internal diameter greater than 6 inches. The CE series can therefore be used for accumulator diameters less than 6 inches. All Roth diaphragm accumulators conform with this regulation. Vessels according to the ASME Code are also accepted in Canada. In Canada, an additional approval (Canadian Registration Number, CRN) is required for the relevant province to which shipment is destined. The province or installation site must be indicated along with the order.

Roth Hydraulics has all important product and company approvals worldwide. The following tables contain a selection of the most common acceptance variants. If your planned installation country or the required acceptance is not listed, please indicate this in plain text along with the enquiry.

### Selection table

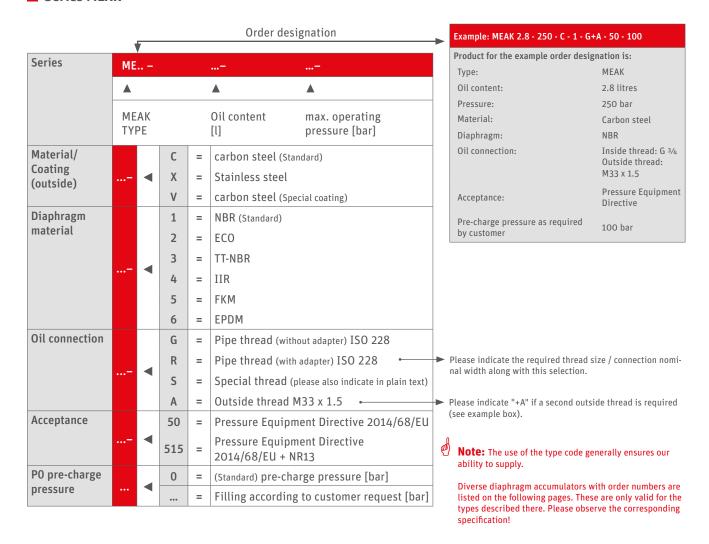

### **Acceptance variants:**

Country code	Countries	Approval regulation	Var. no.
EU	EU member states	Pressure Equipment Directive 2014/68/EU with CE mark	50
BR	Brazil	Pressure Equipment Directive 2014/68/EU + CE mark + NR 13 (Brazil)	515

### Roth Hydraulics

# **Our strengths**Your benefits

### **Innovative**

- > Own product development
- In-house technology centre for all relevant tests and inspections including: Burst and swell test bench, endurance test rig, cold chamber, salt spray test
- > Close collaboration with universities and institutes
- > Tested and proven design and simulation program for all types of hydraulic accumulator

### Global

- > Worldwide production, assembly and service sites
- Certified according to DIN EN ISO 9001:2015, DIN EN ISO 14001
- Proximity to customers thanks to own representatives and extensive dealer network worldwide
- International production approvals, including ASME Code, Russian Customs Union TR-CU, Korea KGS

### **Complete product portfolio**

- Extensive range of diaphragm, bladder and piston accumulators
- Complete and tested accessories range, including for professional installation and for (accumulator) safety
- Accumulator measuring and monitoring systems, mechanical or non-contact
- > Customised special solutions

### **Roth Hydraulics**
